Experience

Associate Solution Engineer July 2025 – Present
Appian *McLean, VA*

- Designed, built, and owned end to end a multi-repository GitLab CI/CD pipeline used by 150+ engineers: JavaScript stages compile developer tooling definitions into structured Markdown, publish versioned artifacts to the GitLab Package Registry, and trigger a downstream Docusaurus build in a separate repository via pipeline tokens, eliminating a second merge-request approval across 100+ contributions in six months.
- Resolved 500+ incident tickets across production, staging, and development Linux environments on AWS and Kubernetes, including response for 30+ P1 outages and root cause analysis producing permanent remediations.
- Automated rolling restarts of application servers using Python and Bash, converting a 1.5+ hour hands-on procedure into a single-click operation requiring no engineer attention.
- Built self-service diagnostic runbooks that connect to customer environments, run Linux command sequences, and return structured findings, cutting investigation time 20–30% across AWS (EC2, IAM, EKS) and Kubernetes environments.
- Authored 25+ Linux and Kubernetes hotkeys adopted into the shared internal tooling library, standardizing frequently repeated diagnostic and cluster operations for engineering and support teams.
- Configured and rolled out Jira notifications into Google Chat across teams that lacked them, authoring setup documentation and onboarding ∼95 engineers across global regions to eliminate manual ticket status checks.

Software Engineering Intern May 2024 – May 2025
Navy Federal Credit Union *Vienna, VA*

- Developed and designed reusable front-end components with HTL, JavaScript, and Sass on an agile team, driving 100K+ user interactions and streamlining cross-team development.
- Refactored 250+ code smells and resolved 100+ security findings using SonarQube, Checkmarx, and BlackDuck, reducing deployment errors 25% and strengthening application security posture.

Undergraduate Teaching Assistant Jan. 2024 – May 2024
University of Virginia *Charlottesville, VA*

- Held weekly office hours for 30+ students on CPU architecture, x86 assembly, memory management, and Linux networking.

Projects

EventEase | *Django, PostgreSQL, AWS S3, GCP*

- Designed and deployed a full-stack, cloud-hosted event planning application using Django and PostgreSQL, supporting authentication, file uploads, and calendar integration.
- Implemented role-based access control, structured relational data models, and S3-backed object storage.

HooRides | *React Native, Firebase, GCP*

- Led an Agile Scrum team of three developers to build a cross-platform mobile application using React Native and Firebase for secure ride-sharing within the UVA community.
- Enabled 1,000+ miles of rides across Central Virginia and presented the platform to 10+ faculty and stakeholders.

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, SQL, Bash, C/C++, HTML/CSS
Cloud & Infrastructure: AWS (EC2, IAM, EKS), GCP, Kubernetes, Docker, Linux, Infrastructure-as-Code
CI/CD & Observability: GitLab CI/CD, pipelines, GitLab Package Registry, Git, Grafana, Prometheus, monitoring, incident response, on-call
Frameworks & Tools: React.js, React Native, Next.js, Node.js, Express.js, Django, Hibernate, Docusaurus, PostgreSQL, Firebase, Jira

Education

University of Virginia Charlottesville, VA
B.A. Computer Science | GPA: 3.97 | Dean's List *Aug. 2022 – May 2025*
